JOIN

Бутенко Сергій

План лекції

Формулювання задачі

Практика

Синтаксис JOIN

ЗАДАЧА

Orders

id	customer_id	product_id	order_date
1	1	1	12:22:23

ЗАДАЧА

Задача

Поєднати дані з таблиць, які містять інформацію про замовлення, покупців і продукти

Orders

id	customer_id	product_id	order_date
1	1	1	12:22:23

Визначення

JOIN — команда поєднання двох, або більше таблиць, які мають між собою зв'язок.

Визначення

customers

id	int
name	text
address	text
city	text
postalCode	text
country	text

products

id	int
name	text
description	text
quantity	int

orders

id	int
customer_id	int
product_id	int
order_date	datetime

Огляд таблиці

id	customer_id	product_id	order_date
1	1	1	12:22:23

id	name	name	description	order_date
1	Sergii	солодка вода	з цукром	12:22:23

Огляд таблиці

id	name	name	description	order_date
1	Sergii	солодка вода	з цукром	12:22:23

◎ JOIN. Синтаксис

```
SELECT orders.id, customers.name, products.name, products.description,  
orders.order_date  
FROM orders  
JOIN customers ON orders.customer_id = customers.id  
JOIN products ON orders.product_id = products.id
```

◎ JOIN. Синтаксис

```
SELECT orders.id, customers.name, products.name, products.description,  
orders.order_date
```

```
FROM orders
```

```
JOIN customers ON orders.customer_id = customers.id
```

```
JOIN products ON orders.product_id = products.id
```

◎ JOIN. Синтаксис

```
SELECT orders.id, customers.name, products.name, products.description,  
orders.order_date
```

```
FROM orders
```

```
JOIN customers ON orders.customer_id = customers.id
```

```
JOIN products ON orders.product_id = products.id
```

◎ JOIN. Синтаксис

```
SELECT orders.id, customers.name, products.name, products.description,  
orders.order_date  
FROM orders
```

```
JOIN customers ON orders.customer_id = customers.id  
JOIN products ON orders.product_id = products.id
```

◎ JOIN. Синтаксис

```
SELECT orders.id, customers.name, products.name, products.description,  
orders.order_date
```

```
FROM orders
```

```
JOIN customers ON orders.customer_id = customers.id
```

```
JOIN products ON orders.product_id = products.id
```

◎ JOIN. Синтаксис

```
SELECT orders.id, customers.name, products.name, products.description,  
orders.order_date  
FROM orders  
JOIN customers ON orders.customer_id = customers.id  
JOIN products ON orders.product_id = products.id
```

◎ JOIN. Синтаксис

```
SELECT orders.id, customers.name, products.name, products.description,  
orders.order_date  
FROM orders  
JOIN customers ON orders.customer_id = customers.id  
JOIN products ON orders.product_id = products.id
```

◎ JOIN. Синтаксис

```
SELECT orders.id, customers.name, products.name, products.description,  
orders.order_date  
FROM orders  
JOIN customers ON orders.customer_id = customers.id  
JOIN products ON orders.product_id = products.id
```

Задача

Створити тест, що перевіряє правильність даних після виконання команди **JOIN** в таблиці **orders**.
А саме порядок даних і дані, які виводяться

```

Підсумки

- ✓ Вивчили, що для поєднання даних з 2х і більше таблиць використовується команда **JOIN**
- ✓ Ознайомилися з синтаксисом команди **JOIN**
- ✓ Написали ще один тест для нашої бази даних
